Same time / different place: Technologies

- Remote interaction
- Video-Conferencing,
- Real-time groupware
- Messaging (Instant messaging, Email)
- Virtual worlds
- Multi-User editors
- Shared Screen (vnc)

Same time / different place: Affordances

- Multi-user participation
- Nonverbal cues
- Differing levels of fidelity (text, voice, avatar)

The Picturephone, 1964

A logical extension of today's telephone service.

Bell System introduces PICTUREPHONE service

Both ends of telephone conversations are identical; people phone by appointment from family-type double or standard rooms.

New York (United Control Station), Chicago (Professional Building), Washington (National Geographic Society Building) and others.

Bell System PICTUREPHONE service lets you call as well as talk to the telephone. And "Touch-Tone" is the new word.

For the first time, people can make a local telephone call to another city — the latest example of the research, invention and development that are constantly improving the communications we provide.

This new service is being offered to the

area listed at the left. Bell System installations at each local office will allow many "one-minute" local-to-long distance calls via radio in place of the other way.

Further development of PICTUREPHONE service is still in the future. But the service is working now toward the goal of providing you with better, more useful, more convenient communication by telephone.

Bell System

Working for you

Western Telephone & Telegraph Co. and Associated Companies

Document Collaboration: Track Changes

Participants with low-bandwidth connections generally assumed the spectator role and often used the text chat feature in the Google Hangout to “speak” in the discussion. Speakers (usually the moderator) would notice the text, and speak it aloud to the other participants. Both speakers and spectators used text-chat to demonstrate active listening without interrupting the speaker via audio (for example, a student wrote, “Working in [company] must be really cool. Thanks for sharing :)”).

A shared video channel forces a single conversation. Still, students sometimes used text-chat as a way for non-discussion related talk, such as exchanging contact information or LinkedIn profiles.

STUDY 1: DO DISCUSSIONS HELP PERFORMANCE?

It is not obvious that the **benefits of peer discussions** [6, 46] would transfer to an online environment. In these environments, peers have vastly different backgrounds and no prior interaction with each other. Therefore, our first study measures the benefits of participation in online discussions. Later experiments measure how these benefits vary with geographic diversity in discussion groups.
